

# Entrenchment vs. Transparency

## Modelling the Dutch strong-weak past tense competition in an agent-based simulation

### Historical Competition

Is the Dutch strong verb inflection bound to disappear?

### Model Design

#### Set-up

- Population: 10 agents
- World: 200 events which occur with a frequency taken from the **Corpus of Spoken Dutch**
- Game: After each event, a hearer and speaker agent are randomly selected to play a language game!

#### Language game

- Task: communicate the event taken place
- How: use the strong or weak past tense
- Lexicon with strong form, weak form and score
- Score indicates chance of strong form being chosen

#### Entrenchment vs. Transparency

Alignment: hearer increases/decreases score of used verb greatly (+/- 0.01)

**Strong entrenchment**  
all verbs start with a bias pro strong inflection (initial score 0.7)

**Weak transparency**  
if a weak form is used, the scores of all verbs are decreased slightly (- 0.0005)

#### World

Event	Chance of occurrence
gaan	0.105168148
...	
kijken	0.027508912
krijgen	0.020419438
...	
schijten	0.000028571

#### Initial lexicon

Event	Strong	Weak	Score
gaan	"ging"	"gade"	0.7
...			
kijken	"keek"	"kijkte"	0.7
krijgen	"kreeg"	"krijgde"	0.7
...			
schijten	"scheet"	"schijtte"	0.7

### Basic model

40 series of 100,000 interactions

#### Hearer-speaker convergence

#### Preference development

#### Influence of frequency on final preference

### Sociolectal Extension

When speaking, a prestigious agent has 5x the normal verb-specific and general effect on the hearer

+ 1 prestigious agent / 10 agents

### Conclusions

- Strong and weak inflection systems may coexist with each its own habitat in the lexicon
- Between the strong inflection's habitat, i.e. the high frequency verbs, and weak inflection's habitat, there is room for variation
- High frequent strong verbs may resist regularization pressure indefinitely
- Prestigious agents
  - speed up convergence
  - enlarge the variation space
  - may turn more frequent verbs weak and less frequent verbs strong according to 'personal taste'

### Future goals

- From **lexicon-based** to **construction-based**
  - Competition between constructions instead of lexical forms using **Fluid Construction Grammar**
  - Making the weak inflection truly productive: new events
  - Internally competing strong verb classes
- Comparing different theories about **the emergence of the weak suffix inflection**
  - Verb + past tense of *to do*
  - Verb + past participle ending
  - Verb + second person singular ending
  - ...
